

RespectUs pitching at the Cassini Matchmaking Launch Event in Paris 17 June 2022

Enabling many more space companies to raise risk capital – that is the objective of the CASSINI Facility. It provides capital to VC funds to be invested into EU-based companies developing and marketing space technology and digital services using space data. While new entrants in the space sector previously found it challenging to raise capital, CASSINI Facility will be a game-changer.

RespectUs was selected among more than 200 applicants to participate within the first batch of start-ups to the launch event, that took place at Viva technology fair in Paris 16-17 June. Bilateral meeting with EU representatives, great talks by the EU Commissioner Thierry Breton, impressive pitches and a lot of networking: all of the elements of a fruitful event.
